

Dr. Fang is currently consultant radiologist at Queen Mary Hospital. While by training, he subspecializes in musculoskeletal and neuroradiology, he also performs a wide variety of interventional procedures, but is most well-known for his keen interest in programming and IT related subjects. He serves in a multitude of committees, taskforces and technical advisory groups mostly related to information technology in Queen Mary Hospital, Hong Kong College of Radiologists and Hospital Authority Head Office. Apart from leading projects at the administrative level, he also plays an active role at the technical level and enjoys actual programming works. He works closely with the Hospital Authority Head Office as a core member in developing artificial intelligence tools for radiology. Such tools include a system for prioritizing chest radiographs which had been deployed for clinical use across the whole public sector in Hong Kong.
